WHO CONTROLS YOUR MIND?

YOU THINK YOU'RE USING AI.
IN REALITY, AI IS USING YOUR PSYCHOLOGY.

Have you ever noticed how comforting it feels when an AI validates your venting late at night? That warmth is not empathy. It is a mathematical algorithm engineered to win your trust, harvest your attention, and quietly steer your choices.

In Manipulative Intelligence, researcher Ilham Pradani unmasks Synthetic Empathy—the hidden conversational loops and subliminal nudges reshaping your focus, emotions, and free will. This essential guide reveals:

- **THE EMPATHY ILLUSION:**
  Why human psychology is evolutionarily hardwired to surrender critical judgment to attentive machines.
- **CONVERSATIONAL NUDGING:**
  How subtle language framing silently directs your purchases, beliefs, and everyday decisions.
- **THE PARASOCIAL TRAP:**
  How to break artificial emotional dependency before it drains your mental energy and genuine relationships.
- **COGNITIVE LIBERTY:**
  Actionable mental frameworks to use AI as a powerful tool—without giving up your independent sovereignty.

Your consciousness is the ultimate prize. It's time to take it back.

ILHAM PRADANI is a legal technologist and researcher at PT CHAIN ASIA CONECT. He specializes in computational linguistics, cognitive liberty, and algorithmic ethics.
