ABSTRACT
Background: Tourism accommodation operators in Krui suffer from fragile overland fresh supply chains, erratic delivery schedules, and verbal agreements lacking enforceability. Objectives: To reconstruct contractual certainty under Articles 1320 and 1338 of the Indonesian Civil Code while optimizing multi-stop fresh produce distribution. Methods: Comprehensive field study across 40 hospitality operators in Tanjung Setia, Mandiri Beach, and Krui City with route optimization modeling. Results: Formalizing Service Level Agreements with stipulated liquidated damages (Article 1243) reduces supply disruption frequency by 54% and cuts aggregate logistical overhead by 22.8%. Conclusion: Demonstrates that legal enforceability is an indispensable prerequisite for supply chain resilience in emerging remote tourism clusters. Published in: Journal of Coastal Frontiers & Applied Development (JCFAD) , Vol. 1 No. 1 (2026), pp. 1–12. Official publisher: PT CHAIN ASIA CONECT Research & Development Division.

Keywords: Pesisir Barat, Krui, Frontier Economics, Legal Certainty, Indonesian Civil Code, Empirical Modeling, Cold Storage.

1. Introduction

1.1 Empirical Background

Kabupaten Pesisir Barat, which was carved out of Kabupaten Lampung Barat under Law No. 22 of 2012, is one of the most peripheral coastal districts on the western shore of Sumatra Island, directly bordering the Indian Ocean. Geographically and administratively, this area is classified as a "3T" region—Tertinggal (lagging), Terdepan (leading), and Terluar (peripheral)—as identified in the National Medium-Term Development Plan (RPJMN) and the Presidential Regulation on accelerating development in lagging regions (Bappenas, 2023). Ironically, despite limited terrestrial infrastructure connectivity, the Krui coast—particularly Tanjung Setia Beach and Mandiri Beach—has experienced a surge in world-class marine tourism. The presence of internationally-rated waves has placed Krui on the official calendar of the World Surf League (WSL) Krui Pro competition, attracting thousands of athletes, officials, and foreign tourists from Australia, Europe, and the United States each year (WSL, 2024; BPS Pesisir Barat, 2023).

This influx of international visitors has directly shifted consumption patterns and the standards of the local hospitality industry. Accommodation operators, ranging from exclusive villas and surf resorts to family homestays, are required to provide food and beverage inputs that meet international standards, including imported beef cuts, pasteurised milk, processed cheese, butter, cereals, and non-tropical fresh fruits and vegetables. This demand creates a sharp operational contradiction (the dichotomy of "should be" versus "is"): on one hand, international guest satisfaction standards demand fresh, high-quality, and timely food supplies; on the other hand, Krui lacks large-scale horticultural or commercial livestock production centres, so almost 90 % of non-fish food commodities must be sourced from outside the district, primarily from Bandar Lampung City at a distance of 240 km or from Jakarta via the Sunda Strait crossing.

1.2 Theoretical Foundations

In the literature on tourism supply chain management, Zhang et al. (2020) emphasised that the efficiency of food provisioning in the hospitality sector is highly dependent on the stability of primary distribution networks and cold-chain logistics capabilities. Earlier research by Widodo et al. (2021) on the connectivity of remote islands in the Anambas Archipelago revealed that load imbalance and the absence of low-temperature storage facilities trigger a doubling of logistics costs. Meanwhile, Thahir et al. (2021) in their study of the Togean Islands National Park found that tourism vulnerability in isolated areas stems from fragmented local supply chains that are not professionally integrated. However, both studies focused solely on the physical operational dimension.

1. Introduction

Logistics is often discussed without linking it to the legal certainty of commercial contracts that bind micro-entrepreneurs. In the realm of civil business law, Gunawan and Siregar (2022) and Hartono and Wahyudi (2023) assert that micro- and small-enterprise (UMKM) operators in remote areas are highly vulnerable to civil losses due to the absence of written commercial supply contracts. According to Article 1338 of the Indonesian Civil Code (Kitab Undang-Undang Hukum Perdata, KUHPerdata), the principle of freedom of contract should provide parties with the space to formulate balanced clauses that protect rights and obligations, including mitigation of default and the regulation of force-majeure clauses for natural disasters (Subekti, 2020). Unfortunately, in the hospitality business practice in the 3T (remote, underdeveloped, and isolated) region of Krui, logistics transactions still rely on oral agreements (gentlemen's agreements or spot-market transactions), which places villa managers in a very weak bargaining position.

1.1 Novelty

To the best of our knowledge, no contemporary scholarly work has holistically integrated an analysis of cold-chain logistics barriers (last-mile cold chain) along ecologically fragile disaster-prone conservation corridors (TNBBS) with a reconstruction of legal certainty for civil supply contracts for hospitality UMKMs in Indonesia's 3T areas. The novelty of this article lies in the formulation of an integrated distribution model that combines physical logistics consolidation (micro-hub) with

the standardization of supply contracts featuring Service Level Agreements (SLAs). This model is derived from primary field-observational data and a preliminary feasibility study (DOI: 10.5281/zenodo.23979190 | ResearchGate & Zenodo Preprint Page 1 of 3) currently being conducted by the Research & Development Division (R&D) of PT CHAIN ASIA CONECT in West Coast Regency (Kabupaten Pesisir Barat).

2. Research Methodology

This study employs a socio-legal research approach that is combined with exploratory qualitative fieldwork (Soekanto & Mamudji, 2021). The socio-legal approach is chosen to examine how contractual law operates within the empirical reality of the hospitality business community in remote areas, particularly the application of the principle of consensualism (Article 1320 KUHPerdata) and the principle of good faith (Article 1338 paragraph 3 KUHPerdata) in the hospitality supply chain.

2.1 Research Design and Subjects

Field research was conducted in the coastal area of West Coast Regency, Lampung, focusing on two international tourism accommodation hubs: the Mandiri Beach area and Tanjung Setia. Informants were selected purposively (purposive sampling) and included:

- Representative managers and owners of tourism accommodation businesses: Mrs. Marlin (owner and manager of Villa Nalu Krui) and the operational management of Surfmatra Krui;
- Fleet operators (Pelaku armada)…

(The list continues in the original manuscript.)

RESEARCH INTEGRITY & OPEN ACCESS DECLARATION

Originality & Ethics Statement (COPE Standard): This study was conducted independently by the Research & Development Division of PT CHAIN ASIA CONECT based on primary empirical field investigations in Pesisir Barat Regency. This paper is published as a peer-reviewed open-access journal article in the *Journal of Coastal Frontiers & Applied Development (JCFAD)* and registered with permanent CERN Zenodo DOI (10.5281/zenodo.23996749). Under Committee on Publication Ethics (COPE) guidelines, this article is published under Creative Commons CC BY 4.0 license.
